Subject: SKEO meeting follow up

Hi Mike,

The call with SKEO went well. They will provide to us a revised CIP based on our feedback no later than Dec 12 (that is when I get back to the office). From there, we committed to an expedited revision process (me just making final changes) so that they can take final draft text and incorporate graphics and layout. We are aiming for a final draft CIP, with text and layout, to be ready for public review by mid-Jan. That can be a part of the next site update if we don't have one before then. From there, I will compile any feedback we receive and work with SKEO to finalize the CIP.

Afterward the CIP is finalized, we agreed to work to develop a fact sheet. Not sure if you have thoughts on this, my two suggestions:

- CFAC Contaminants of Concern: Outlines the contaminants of concern at the site, what effects they have on human health, the pathways for exposures, and what the public can do to protect themselves.
- CFAC Superfund Site Overview: Provides a general description of the site, how it is managed, and the timeline for Superfund implementation.

One other thing, they would like more pictures. Do we have historic photos of the site? Others? I only have poor-quality images of the Sen. Tester visit.

Thanks Mike!
